## **Unboxing – Handle with Care!**

Congratulations on the purchase of your Ultimate Fantasy Doll! We understand that you've invested a lot of money in your TPE companion and we want you to enjoy her for as long as possible. Please remember that each doll is a one-of-a-kind, handmade, work of art with it's own serial number and unique features and variances. It's essential that you follow these care and maintenance instructions very closely to keep your partner in tip-top shape.

Your doll weighs over 80 lbs. (36 kg) and unpacking her requires extreme caution. It's important to keep the box facing up on a flat surface when opening. Be sure to wear the included white cotton gloves every time you handle the doll to prevent staining her skin.

Most of our customers have never seen or handled a full-size TPE doll, so we recommend having someone assist you when removing her from the shipping carton. The doll bends easily at the waist, so gently lift her shoulders and legs simultaneously and lay her on a soft surface (like a sofa or bed) to avoid flattening any body parts. Do not lay her on dark fabrics; use a white sheet or blanket.

Once she's out of the box, carefully remove the protective wrapping material from your doll and make sure not to cut her skin when removing the packing tape.

## **Head Installation**

Your Ultimate Fantasy Doll's head arrives unassembled and attaches to the body by screwing onto the neck. Connect the neck to the hole in the bottom of the head, tightening clockwise until snug. Make sure **NOT** to over-tighten or the head may become damaged.

## **Posing DOs and DON'Ts**

Your Ultimate Fantasy Doll has a tolerance when posing or positioning her. Her joints may be a little stiff upon arrival, but after a few days they will loosen up and she'll be able to move freely in a variety of positions. Please be aware that the joints and hinges of the stainless-steel skeleton cannot bear weight or pressure for extended periods of time.

**DO NOT** leave your doll's arms or legs up or open for extended periods of time. If left up or open, the stress placed on the underarms, elbows, knees, and groin area will cause the TPE to stretch, rip, or tear.

It's very common to leave your doll posed in a position for as little as a day, only to later find rips or tears in the areas listed. **ALWAYS** return your doll back to a neutral, stress-free position when not in use. Make sure that her arms are down by her sides and that her legs are closed when she's not being used.

## **Avoid Dark Fabrics, Inks, Furniture, and Materials**

**DO NOT** dress your doll in dark clothing or leave her on dark materials, furniture, or fabrics. Shoes with dark insoles should also be avoided. The doll's TPE skin is very porous and will absorb any dark oil-soluble pigments, newspaper or magazine inks, or dyed fabrics.

## **Maintenance and Storage**

One of the main additives to the TPE formula is oil—it's this oil that moisturizes your doll's skin and helps it retain elasticity. On a regular basis, **YOU MUST** apply the included Fanta Flesh Revive Powder after cleaning your doll in order to lock the oil into the skin and keep it from becoming tacky. If the skin gets tacky after washing, apply a generous amount of the powder to her skin to make it velvety soft and smooth again. If not, the TPE will dry out, become brittle, and be subject to ripping and tearing.

**DO NOT** store your doll in a posed position, sitting, or laying on a hard, flat surface. The TPE is soft and malleable and subject to creasing, flattening, and compression marks if left on or up against a hard, flat surface. Shoes with tight straps or buckles can also cause damage to the TPE.

## **Inserts and Mouth**

Your Ultimate Fantasy Doll comes assembled with a TPE masturbation sleeve inserted into her vagina and an extra replacement sleeve in the plastic bag. During the doll's transit, the TPE sleeve may fuse together with the inner-vaginal walls. You may have to break the seal formed between the sleeve and the canal in order to remove the sleeve entirely for cleaning. Don't worry—the sleeve was designed to be inserted and removed and any fusion of the materials was not intentional.

Your doll's mouth may have the same problem. The mouth does open, but heat may have fused the doll's top and bottom lip together during transit. If this occurs, simply pull the lips apart to reveal her oral passage.

**Remember to read entire Care & Usage Guide before using the doll.**
